MUSIC SERVERS

As one of the specialists of digital sources, Métronome couldn't stay apart of the great adventure of high-resolution music, and create their audiophile music server.

All possibilities are in your hands with the Music Center 1: play a CD, create a playlist from files stored locally, read directly from a USB key or an external hard drive, and read on your local network under DLNA protocol.

The file storage function is performed on 3 hard disks secured by a RAID3 type operating system. In order to store its files, you can either

copy / paste his downloaded tracks directly onto the server, or rip your favourite CDs in WAV or FLAC format with automatic recover of all tags.

The Music Center 1 has been fully developed by the teams from Métronome Technologie, both hardware and software. The device runs with Linux, which gives it great computing robustness and the mobile terminal management application (Apple iOS and Android) is a model of soberness and functionality.

TECHNICAL FEATURES

Storage capacity :
1 TB with with SATA or SSD hard drives

App :
Android and iOS apps with free download from Google PlayStore and AppleStore.

Digital outputs :
AES/EBU 110 Ohms XLR connector
S/PDIF 75 Ohms RCA connector
Toslink optical
USB type B
Accepts high resolution signals up to 32 bits 384 kHz

Digital inputs :
2 USB 2.0 inputs

Network :
Ethernet and wifi

Power supply :
EMI rejection by Schaffner filters
3 main high quality toroidal transformers and 6 separate and independent regulation lines

Voltage :
100 VAC - 50/60 Hz Japan
120/240 VAC - 50/60 Hz Other Countries

Other characteristics :
Power consumption : 40 VA
Dimensions (WxHxD) : 450 x 115 x 435 mm
Weight : 12 kg

Front view with tablet (not provided)
